

# Coding comrades

---

- **Problem Statement** : We have made a website as same as our college website(Gautam Buddha University).In which we also tried to add something new in our website like we added one registration form for the current event which is Code Fellas.

- **Requirements** :

## **Software Required** :

- ❖ Visual Studio Code
- ❖ React Js
- ❖ Git Bash
- ❖ Chrome
- ❖ Command Prompt

- **Technologies Used** :

## **Frontend** :

- ❖ HTML
- ❖ CSS
- ❖ REACT JS

## **Frameworks** :

❖ Bootstraps

## Scripting Language:

❖ Javascript

- **Project Description :** We tried to make a website as same as our college website for the purpose of online Code Fellas registration form. In which we used Frontend development. The language we used in frontend is HTML for skeleton for our code ,CSS for designing and etc...And we also used REACT JS for virtual browser.
  - For frameworks in our project or in our code we used BOOTSTRAPS and scripting language we used JAVASCRIPT.
- **Scope :** Features of our project we can easily find registration form and all the necessary details and complete requirements from one place .
- **Challenges Faced :** This is our first project so we had faced so many problems like...
  - ❖ \_As you know we are in 3<sup>rd</sup> semester in which we were taught only HTML language but we pushed ourselves for the Hackathon.

- ❖ We learned Bootstrap, CSS and React js in very short period of time.
- ❖ Running github,git cmd and reactjs for the first time is not possible for us but we devote our whole time in our project to get desired output.

- **Conclusion :**

“web development is not only about the creating a websites ,its also about the self development.”

\_\_\_From this project we have learned too many things like how to create websites, how to work under the pressure and most important thing is self learning. But still we haven't get very well command in all of these new things but we have given our best.

Hope you like our project.

Thank you!!!!
